Comments

Note: On 1975 and later cars, the Early Style Exhaust System is needed.

911 SC Distributors, and most other 911 distributors, should be recurved.

For DME-Motronic engines ('84-'98) the existing distributor(s) can be modified to function like 911 SC distributors and fire MSD 6AL ignition boxes (#6425). The MSD Blaster high vibration ignition coils (#8222) are mandatory. The 90 degree coil boot and terminal are also needed (#3331).
